Get Regular Eye Exams

Even if you aren't having trouble with your vision, it's important to get regular, comprehensive eye exams. Your eyecare professional can uncover problems before symptoms occur — and can even provide early detection of serious health problems, such as diabetes, high blood pressure and certain cancers.

Ask About Lens Options

Talk to your eyecare professional about lens options that can enhance your vision and keep your eyes healthy for a lifetime.

- Anti-reflective coatings reduce annoying reflections that can make it difficult for you to see clearly and comfortably.
- Transitions® lenses darken and adapt in changing outdoor lighting conditions — helping to optimize your vision by reducing glare, eyestrain and fatigue. They also block 100 percent of UV rays, helping to protect your long-term eye health.
- Impact-resistant lens materials — like polycarbonate and Trivex® — can help protect you from sports-related eye injuries.

Recognize the Signs

Trouble seeing, headaches, eyestrain, fatigue, watery/uncomfortable eyes and excessive blinking may be signs that you need vision correction.

Trivex is a registered trademark of PPG Industries Ohio, Inc.

WHAT'S HAPPENING TO THE EYE?

Early in Life

Childhood is a crucial time in the development of the eyes. Vision problems, such as trouble seeing up close or far away, can lead to poor grades, frustration and even physical complaints such as headaches.

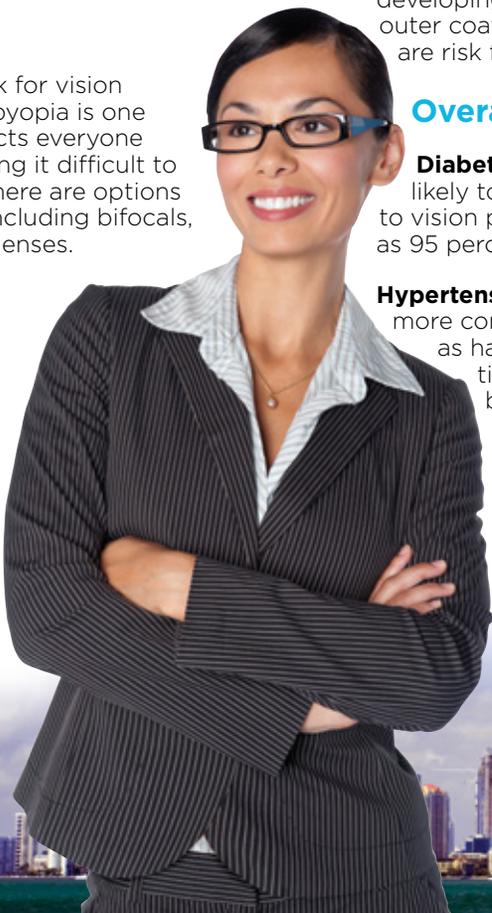

Children are also outside more than adults, and their eyes are more vulnerable to damage from UV rays — which can lead to serious eye health issues later in life. Eyewear to correct and protect vision is important for kids of all ages, whether they're inside working on a computer or outside playing sports.

Mid Life

As you get older, your risk for vision problems increases. Presbyopia is one problem that usually affects everyone by the age of 40 by making it difficult to focus on close objects. There are options for treating presbyopia, including bifocals, trifocals and progressive lenses.

Later in Life

People over the age of 60 have a higher risk for serious, sight-threatening eye conditions — like cataracts, glaucoma and macular degeneration. Loss or deterioration of eyesight can impact your safety and independence. Vision problems can make daily activities (like driving) difficult, and leisure time less enjoyable.

FOCUS ON HISPANICS: EYE AND OVERALL HEALTH ISSUES

Hispanics are at higher risk for many serious eye and overall health issues.

Eye Health Issues

Cataract: Cataract is the clouding of the eye's lens. It is three times more common in Hispanics vs. Caucasians and African Americans.

Glaucoma: Open-angle glaucoma is the most common cause of blindness among Hispanics.

Pterygia: Hispanics are at higher risk for developing pterygia, or the thickening of the outer coating of the eye. UV exposure and wind are risk factors.

Overall Health Issues

Diabetes: Hispanics are three times more likely to suffer from diabetes, which can lead to vision problems and even blindness. As many as 95 percent have preventable, type 2 diabetes.

Hypertension: While high blood pressure is more common among Hispanics, as many as half don't know they have it. Over time, it can lead to vision problems or blindness.

DID YOU KNOW certain health problems — like diabetes — are visible in the eye, even before symptoms occur? For this reason, the eye doctor is often the first health professional to detect serious health problems.

PROTECT YOUR FAMILY'S VISION

Healthy vision begins with regular eye exams. Talk to your eyecare professional to find out how often you should schedule a comprehensive exam for yourself and your family.

Focus on Yourself

It is easy to become busy with work or life responsibilities — but don't forget to take time out of your hectic schedule to make an eye appointment. Even if you aren't experiencing vision problems today, your eye doctor can help prevent future problems and recommend the best eyewear to meet your everyday needs.

Focus on Your Kids

Vision screenings identify only 5 percent of possible vision problems — and a routine pediatrician visit should not replace a comprehensive eye exam. Even if your children are not complaining of vision problems, they may need vision correction to help them perform better in school and in extracurricular activities.

Focus on Senior Family Members

Your older relatives are at higher risk for eye diseases and vision problems. Make sure they are scheduling regular eye exams to detect problems and prevent vision loss before it's too late.

TALK TO YOUR EYECARE PROFESSIONAL

Many of the things you do every day can affect your vision.

- Your lifestyle, including sports and activities
- Overall health issues or family history
- Prescription and over-the-counter medications, including vitamins and herbal supplements

Ask About Bilingual and Spanish-Language Resources

Tell your eyecare professional if you or any of your family members feel more comfortable speaking in Spanish. Ask about available bilingual and in-language resources, including a Spanish version of this brochure.
